Intro

Domain of EPART

Pattern recognition system:

- input
- sensing
- segmentation
- feature extraction
- classification (missing features, use of context information)
- post-processing (risk-estimation)
- decision

EPART interests in classification, post-processing and decision

Design cycle

1. start
2. collect data
3. choose features (using domain knowledge)
4. choose model
5. train classifier (problem of overfitting)
6. evaluate classifier
