Test VM login

https://learn.fabric-testbed.net/knowledge-base/generating-ssh-configuration-and-ssh-keys/
https://learn.fabric-testbed.net/knowledge-base/logging-into-fabric-vms/

- bastion keys are revoked often, have to generate often
- start with generating your keys (remember to change key name xD)

```
ssh-keygen -t rsa -b 3072 -f ~/.ssh/fabric_silver_key  -C "pultyn-sliver"
ssh-keygen -t rsa -b 3072 -f ~/.ssh/fabric_bastion_key -C "pultyn-bastion"
```

- add them on experiments -> manage ssh keys
- create file `~/.ssh/fabric_config` (bastion username should be seen at the top of the manage ssh keys page):

```
UserKnownHostsFile /dev/null
StrictHostKeyChecking no
ServerAliveInterval 120

Host bastion.fabric-testbed.net
     User <FABRIC_BASTION_USERNAME>
     ForwardAgent yes
     Hostname %h
     IdentityFile <FABRIC_BASTION_PRIVATE_KEY_LOCATION>
     IdentitiesOnly yes

Host * !bastion.fabric-testbed.net
     ProxyJump <FABRIC_BASTION_USERNAME>@bastion.fabric-testbed.net:22
```

- then you need to have the public key on the vm. Either contact me or login with ephermal key and append the `~/.ssh/authorized_keys` file
- you connect with

```
ssh -F ~/.ssh/fabric_config -i ~/.ssh/fabric_silver_key
ubuntu@2001:18e8:fff0:3:f816:3eff:feb9:469a
```
